

b.) Amendment to the Abstract

Please amend the abstract at page 26 to read as follows.

ABSTRACT

A display device provided with a specular reflective layer (16), which is excellent in preventing theft and tampering is provided. The display device is composed of a surface-protective layer (1), information display layer (3), reflective resin sheet (4) and substrate-adhesive layer (5). A specular reflective layer (16) is installed on the reflective resin sheet (4) via a destructive layer (14) and focusing layer (15). When the display device is peeled off from the installation substrate (6), the peeling takes place at the interface of the destructive layer (14) and the reflective resin sheet (4) or specular reflective layer (16) in contact with the destructive layer (14), and/or by destruction of the destructive layer (14), and the specular reflective layer (16) remains on the installation substrate (6). RFID device may be installed on the back of the display device.
